AMPS Online Proposal

Introduction

Thank you for giving us the opportunity to provide you with a proposal for the redesign of the AMPS Online website. We would like to offer you a little background regarding us, especially as we are not tendering as a corporate entity.

Matthew is employed as a Software Development Manager in a worldwide supply & distribution company. He oversees a team of 20 software engineers developing software platforms for both internal use & external clients.

James is a Senior Systems Developer working for a large national brewery. He designs & develops software for use throughout the brewing & pub industry.

Having met ten years ago while studying at University, we both started our careers working for the same company. As our careers developed onward in different directions, we decided to continue to work together informally, taking on outside contracts in addition to our employment. Five years on, we have built up a large portfolio of clients who trust our web-engines & business-oriented systems to help grow their online business presence.

Our approach is different from some other web design firms. We focus on quality rather than quantity. We do not have large overheads and we only work with one client at a time to ensure we provide excellent service. Our work is completely bespoke, tailored to each client's individual needs. We take great pride & pleasure in the work that we do, and this is the main reason we continue to work together, and why our clients trust us.

Technology

Our proposal is a complete bespoke site tailored to meet your requirements while offering the possibility of future upgrades to keep pace with new technology & opportunities.

Currently the AMPS Online site is based on the Drupal Content Management System (CMS). While this can be customised, it does not offer the flexibility of our proposal, ties you in to an upgrade cycle, and keeps your data in closed proprietary systems. The one-size-fits all of an off the peg CMS does not offer the opportunity for organic growth to keep pace with the industry.

Our proposal is based on open industry standards widely used & adopted by many companies from small start-ups to giant multinationals. It offers a self-contained, self-maintainable and dynamic web engine designed with speed, reliability & ease of use in mind while also keeping your private data private. Engineered & built to meet your exact specifications, it can also be further developed in the future to keep pace with your changing requirements & new technologies that appear.

Outline Proposal

We deliver in four key stages:

- **Stage one** is information gathering. We will liaise with you to understand in detail your requirements for AMPS Online.
- **At stage two** we will deliver a usability model based on your requirements for you to test. We will gather feedback from this process to ensure your design requirements are being met.
- **At stage three** we will deliver a working product & ask you to produce a snagging list.
- **Stage four** is installation of the finished site & our comprehensive ongoing support solution.

After reading through your requirements our proposal is as follows:

We have split the site into three main areas:

Public Site

- Home page with navigation.
- Sub pages which can be added & edited at will. Navigation will auto-update.
- Public list of AMPS members, with additional contact information, services provided.
- Possible advertising
- Simple sign-up form to become a Member
- Contact details & contact us pages
- Search Engine Optimised content & navigation to enhance visibility

Private Member Portal

- Forum
 - Ability to create Topics & Discussions within those topics.
 - Spammer protection (eg CAPTCHA images).
 - Access control & Roles for forum users.
 - Polls or voting system
- Newsletter page
 - Searchable archive of newsletters.
 - Other types of document can also be added and would be searchable.
 - A 'wiki'-like search interface to make finding things easy.
 - This is an important part of the site, and would contain a large amount of knowledge.
- Member Profile Pages
 - 'Facebook' or 'LinkedIn'-esque profile page, with pictures, conversations and other functionality such as links to current newsletter. This would be a sort of 'landing page'
 - Members can ask to have their details updated by an Administrator. Additionally, members may belong to a company or other grouping.
 - Possibility for future advertising opportunities.
 - Different forms or levels of membership which can be expanded upon.
- Event Calendar
 - Calendar shows upcoming events/AGM/Courses etc.
 - Possibility for members to 'book' themselves onto events etc.
 - Possible reminder emails via a sign-up mechanism.
 - Possibility to invite other members.

Committee Area

- Forum
 - The same as for Members but private to Committee Members only.
 - Committee Members can also be ordinary members & can access both areas.
- Document library
 - Allow members to upload, tag & categorise their documents.
 - Access & share them securely with members, or possibly public via time-limited passwords or some other secure mechanism.
- Event calendar
 - Same as for member area.

The Member Portal (MP) is a secure, protected area which is only accessible via user-specific credentials. From this area a member will have access to shared resources, group information (eg Companies) and specific resources (eg other members' profiles, documents)

The Committee Area (CA) is similar to the MP but solely for AMPS Committee Members. Committee members could also have full access to the MP (if they so wished).

The public site will be a useful repository of information for the general public as well as for industry members. We will focus heavily on a clean, simple layout with emphasis on useful information that is highly relevant. This area will benefit greatly from Search Engine Optimisation (SEO) which will increase the visibility of the site on search engines (google, live, yahoo etc).

The usability of the site will be enhanced with a simple & intuitive menu structure and search to enable visitors to easily and quickly find information.

The look & feel will be updated to a cleaner, more modern look in keeping with the industry while projecting a trustworthy brand image.

Existing branding & artwork/imagery will be reviewed & updated if required & wanted. New imagery can also be provided if required.

Costs & Timescales.

We could comfortably deliver the above to you within 50 days of appointment.

We would be delighted to take on this project for the fully inclusive fee of £5,900.00

The above fee incorporates all costs and labour involved in delivering to the above specification within the timescale, but excludes support fee's.

In reference to ongoing support costs we can come to some arrangement depending on the level of support you require.

I look forward to hearing from you and sincerely thank you for the opportunity of providing a quotation.

Matt Creak / 01455 273 873 / 01455 273 113
